

Liquid Vitamin and Cobalt Supplement

Get the REAL DEAL

**Ask us how
more yield on less feed can put
more cash in your pocket.**

"I've been using Nature's Wave products successfully for many years. I feel that great production and profit is a combination of many factors; proper nutrition, preventative health, crop management and genetics. When I started using LVMS8 in July, I observed a 2 kg per cow per day increase in milk production and my reproduction numbers have stayed consistently higher than average. I feel that LVMS8 enables my cows to handle stress better. LVMS8 is an energy booster, assisting my herd reach their genetic potential."

- Marvin Weber, Hesson Holsteins, ON

Helping your livestock
reach their genetic potential.

Feeding rates for sustainable agriculture:

New born calves- 5 ml at birth in mouth

New arrivals- 5 ml in mouth, 3 ml /day in milk

Continue feeding at 3ml per day, if a scour or respiratory issue occurs, dose orally with 8 to 12 ml for a few days, and consult with your veterinarian.

Weaned calves- 3-5 ml /day as necessary

Replacement heifers- 5 ml /day

Pregnant cows- 10 ml/day 2 weeks before calving

Lactating Dairy cows- 10 ml/day for 30 days post calving, then 7 ml until rebred and full milk production achieved

Nursing Beef cows- 6-10 ml /day mixed in feed or dry mineral

Breeding bulls- 10 ml /day for 60-90 days pre breeding

Sheep or Goats- 3 ml /day in feed or water
Lambs or Kids- 1 ml oral at birth, .5 ml /day in milk

Increase doses by 2-3 times when health or stress issues arise.

*LVMS8 evolved from Boviglo

*Beef cattle on **Boviglo** gained an average of 29 lbs more than untreated, and feed conversion improved in a 110-day backgrounding trial.

* Better feed conversion (7.43 lbs feed/1 lb gain vs. 8.1 lbs feed/1 lb gain)

* Finishing trial: **Boviglo** improved ADG (.15 lb. per day higher than control) along with better feed conversion
